SUMMARY

Backend Developer with hands-on experience in Python, Django, and Django REST Framework (DRF), built through multiple full-stack projects and practical implementation of scalable backend solutions. Skilled in REST API development, relational and NoSQL database design, and Object-Oriented Programming. Experienced with web scraping and data extraction pipelines, and passionate about building reliable, high-performance applications.

SKILLS

Backend Development: Django, Django REST Framework (DRF), FastAPI, RESTful API Design

Databases: PostgreSQL, MongoDB, NoSQL Data Modeling (LanceDB)

Architecture: Microservices-style Service Separation, Monolith, Async/Streaming APIs, Service-to-Service Authentication

Authentication & Security: JWT, OAuth 2.0, Role-Based Access Control (RBAC)

Languages & Frontend: Python, JavaScript, TypeScript, HTML, CSS, Next.js, React

Tools & DevOps: Git, Docker (Basic), Docker Compose, Redis, Celery, Postman, VS Code, CI/CD basics

PROJECTS

NexusAI — AI Productivity Platform [Live Demo](#) | [GitHub](#)

FastAPI · PostgreSQL · LanceDB · JWT · Groq (LLaMA-3)

- Architected 6+ REST API endpoints with FastAPI across 3 modular services (document processing, retrieval, and chat), implementing a service-oriented backend structure.
- Engineered a RAG pipeline over PostgreSQL and LanceDB, indexing 200+ PDF pages for semantic search with sub-2-second average query response time.
- Developed JWT-based authentication supporting persistent multi-user chat history, tested with 20+ concurrent sessions during deployment.
- Optimized API performance using asynchronous streaming responses, reducing perceived latency by approximately 40% versus synchronous request handling

CleanRide — Online Car Wash Booking Platform [Live Demo](#) | [GitHub](#)

Django REST Framework · Next.js · PostgreSQL · Khalti

- Developed a scalable backend using Django REST Framework across 4 modular applications (bookings, payments, queue, users), delivering 10+ production REST API endpoints
- Designed and normalized a PostgreSQL relational schema spanning 10+ tables to support booking management, service scheduling, and staff capacity planning, powering a queue-estimation algorithm accurate to within 5 minutes
- Implemented JWT authentication with Django REST Framework-based Role-Based Access Control (RBAC), enforcing granular permissions across 3 user roles (customer, staff, admin)
- Integrated the Khalti payment gateway with server-side transaction verification, achieving 100% verification accuracy across test scenarios; applied OOP design patterns to reduce code duplication via 5+ reusable base classes

E-LEARNER — Course & Video Learning Platform [GitHub](#)

Django · Django Templates · SQLite Database

- Built a server-rendered e-learning platform in Django supporting 3+ sample courses and 10+ video lessons, using Django's MVT architecture end-to-end.
- Designed relational models for courses, lessons, and student enrollment using the Django ORM across 6+ tables, applying OOP principles to keep model logic reusable and reduce duplication.
- Implemented user authentication and session-based access control so only enrolled students can view course content, tested with 10+ user accounts.
- Wrote and optimized SQL queries through the ORM for course listing and filtering, cutting average page load time by roughly 20%.

EDUCATION

Bachelor of Science (BSc) — Expected 2027

Tri-Chandra Multiple Campus, kathmandu

TRAINING & CERTIFICATIONS

- Python with Django — Sipalaya Infotech (2025)
- REST API (Intermediate) Certificate — HackerRank (2026)
